

Optimised and even more versatile

The new 862 and 857 series of card readers

The newly developed card readers from ddm hopt + schuler are functionally versatile and sturdily built, thus making them invaluable in numerous applications. Areas of application include payment terminals, kiosk systems, security systems, and access control systems. Both readers can be custom configured, therefore allowing them to be tailored perfectly to your particular requirements and integrated easily. Please ask us about them – we will be very pleased to advise you.

New: 862 "Tribrid"

- 3 card types on 1 circuit board: smart card, 3-track magnetic card, RFID card
- RS-232 and/or USB interface
- Up to max. 4 SAMs
