

For cards from all over the world

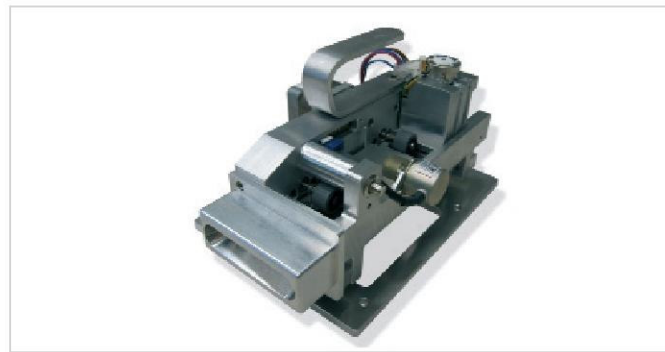

## The Hybrid Readers

for magnetic cards,  
chip cards and RFID cards

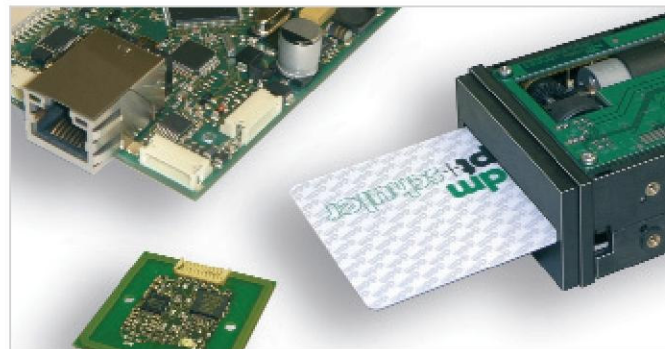

Are you looking for a reader that reads everything? One that suits your particular application? Well, we have just the thing for you. Our hybrid reader can handle RFID and magnetic cards, it can combine paper tickets with bankcards, and it can be used as a manually-operated or motorised solution. And what is more, it is very flexible: it can be used as an inexpensive banking solution or as a high-end solution for toll booths and car parks, and it is deployable with an acceptor or as an all-in-one built-in solution that is network compatible. These are all good reasons why our readers are accepted all over the world.

### Details at a glance:

- For access control: businesses, banks, hospitals, and car parks
- As a payment terminal: petrol stations, restaurants, discount stores, hotels, and casinos
- Space-saving tailored solutions
- For cards in accordance with ISO 14443, ISO 7811, ISO 7816 (Mifare, magnetic cards or bank cards)
- Interfaces: TTL, RS232, USB, TCP/IP (Ethernet), and RS485
