The Card Reader Family Type 868

Minimum size and many features. The card readers of type 868 tackle every task. They are ideal for installing in cash terminals and access control systems whether installed inside or outdoors. Thanks to their modular construction, they can be used in numerous applications: as pure magnetic card readers to read from 1, 2 or 3 tracks, reading the entire length of the card. Or else as smart or hybrid card readers for smart cards according to ISO 7816. The choice is yours!
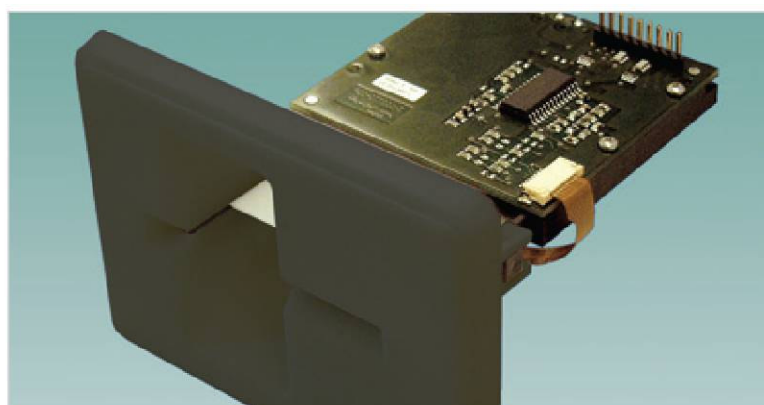

The facts at a glance:

- Interfaces: TTL, RS232 and USB
- Validated according to EMV 4.0 Level 1 (RS232 and USB version)
- Reading and writing on memory and smart cards
- Security Access Module (SAM) on the circuit card
- Windows and Linux drivers for simple integration into customer applications

Optional:

- Bezel made of plastic or metal
- Can be combined with contactless readers of type 880 (ISO 14443 A/B, Paypass, Mifare)

868 with a serial interface (validated according to EMV)
